Thursday, March 15, 2018  
During School Group Visits  
Exhibit Hall  
Quinnipiac University

In the physical world some things that happen often appear to be magical. Science provides the explanations-- there is no magic but a puzzle that keeps scientists busy understanding. Physics experiments in electricity, magnetism, heat, light, and mechanics experiments are amazing to see, but the fun is in understanding. Join Mr. Erickson and Mr. Vartenigian and see the sometimes hard to believe science in action. This "minds-on" show will challenge you and perhaps give you ideas for experiments of your own!

Robert V. Erickson spent his career assisting students in experimental procedures in the physics laboratories of the University of Connecticut. George Vartenigian, is a retired physics teacher from Norwich Free Academy. From their many years of physics teaching experience, Bob and George have picked their favorite demonstrations to produce an exciting one hour science adventure for middle and high school audiences.

70<sup>th</sup> Anniversary Year
